en el ámbito nacional el tránsito hacia un modelo de acceso abierto de la divulgación científica apenas está empezando a consolidarse puesto que todavía los círculos de científicos conservadores siguen viendo con desconfianza el conocimiento que se difunde en revistas que siguen esta política editorial un indicador de esta situación es que apenas el año antepasado precisamente el 20 de mayo de 2014 se le adicionó a la ley de ciencia y tecnología el capítulo x relacionado con la divulgación de la información científica tecnológica y de innovación mediante una política de acceso abierto diario oficial de la federación 2014 al margen de los fuegos fatuos creados por los editores tradicionales en la actualidad el movimiento de acceso abierto enfrenta un gran desafío puesto que evidentemente para garantizar la calidad del contenido que se difunde a través de esta

modalidad existe un costo para hacer funcionar toda la cadena de producción y divulgación de los conocimientos científicos y evidentemente alguien tiene que pagar o absorber ese costo precisamente en el artículo editorial de este número se presentan los modelos de negocios que se están aplicando para garantizar la sostenibilidad de las revistas que impulsan el acceso abierto a la divulgación del conocimiento científico movimiento al que está incorporada la revista digital internacional de psicología y ciencia social el volumen de esta revista está constituido por tres artículo empíricos una revisión de la literatura y en la sección de la psicología ayer y hoy se publica la traducción de un artículo relacionado con la visión cualitativa de la investigación científica la sección de artículos empíricos comienza con el trabajo de jimenez y negrete en donde se exponen los resultados de un estudio realizado entre las viviendas urbanas y rurales con el propósito de conocer las diferencias entre el uso del espacio en ambos ambientes los hallazgos mostraron importantes diferencias en el uso de las viviendas en estos dos contextos por lo tanto es notable la importancia de atender los espacios habitacionales rurales a los objetivos de la psicología ambiental el siguiente artículo que compone este número es el realizado por la autora damián díaz el cual muestra la exploración que se realizó a los juegos elegidos por niños en los primeros años de su etapa escolar los resultados muestran las preferencias de juego en contextos como el hogar y la escuela además de que es posible distinguir el juego favorito para niños y para niñas en su primer grado de primaria el segundo y el tercero continuando con los estudios empíricos presentados en este número el artículo de los autores ortiz y moreno canaliza de igual manera sus propósitos hacia objetivos psicoeducativos pero a diferencia del artículo presentado por damián díaz éste se dirige hacia adolescentes de educación secundaria el estudio muestra de manera clara y amena la influencia que tiene el estilo parental en el rendimiento académico categorizando en autoritario democrático y negligente para esto se midió el estilo parental de los padres de 90 adolescentes con el propósito de identificar la relación que éste ejercía en el rendimiento académico prestando especial atención en situaciones en las que se compartía por ambos padres o difería entre ellos el estilo parental continuando en esta línea el artículo de flores rivera y sánchez nos habla de rendimiento académico pero en este caso en un nivel de educación superior el objetivo de este estudio fue determinar la influencia de los factores sociopsicopedagógicos en el rendimiento académico de alumnos de medicina se pretendió determinar con exactitud la influencia que tienen ciertos factores en el éxito escolar para esto se indagó en la historia escolar del alumno proyecto de vida hábitos y técnicas de estudio relaciones con docentes compañeros y familiares esperando encontrar una fuerte relación de uno o varios de ellos con el bajo o alto rendimiento los resultados y las conclusiones son interesantes y

From Grams to Pounds: A Simple Guide to Unit Conversion

Understanding different units of measurement is crucial in various aspects of life, from cooking and baking to international trade and scientific research. Often, we encounter the need to convert between the metric system (grams, kilograms) and the imperial system (pounds, ounces). This article focuses on converting 200 grams to pounds, demystifying the process and providing you with the tools to perform similar conversions independently.

Understanding Grams and Pounds

Before diving into the conversion, let's clarify the units involved. The gram (g) is a unit of mass in the metric system. It's a relatively small unit, commonly used for measuring smaller quantities of ingredients, materials, or objects. The pound (lb) is a unit of mass in the imperial system, a system still widely used in several countries. A pound is significantly larger than a gram. This difference in scale is why conversion is necessary.

The Conversion Factor: The Key to Success

The core of any unit conversion lies in the conversion factor. This factor represents the ratio between the two units. There are approximately 453.592 grams in one pound. This means that $1 \text{ lb} \approx 453.592 \text{ g}$. The symbol " \approx " means "approximately equal to" because the conversion factor is not an exact whole number. We often use a simplified factor of 454 grams per pound for everyday calculations, resulting in a slight difference in precision.

Calculating 200 Grams to Pounds: The Step-by-Step Approach

Now, let's convert 200 grams to pounds using both the precise and simplified conversion factors. Method 1: Using the Precise Conversion Factor: 1. Start with the given value: 200 grams 2. Apply the conversion factor: We know that $1 \text{ lb} \approx 453.592 \text{ g}$. To convert grams to pounds, we divide the number of grams by the number of grams in a pound. 3. Perform

the calculation: $200 \text{ g} / 453.592 \text{ g/lb} \approx 0.44 \text{ lb}$ Therefore, using the precise conversion factor, 200 grams is approximately 0.44 pounds. Method 2: Using the Simplified Conversion Factor: 1. Start with the given value: 200 grams 2. Apply the simplified conversion factor: We'll use the approximation $1 \text{ lb} \approx 454 \text{ g}$. 3. Perform the calculation: $200 \text{ g} / 454 \text{ g/lb} \approx 0.44 \text{ lb}$ As you can see, using the simplified conversion factor still gives us approximately 0.44 pounds. The difference between the two methods is negligible for most practical applications.

Practical Examples: Making the Conversion Relatable

Let's consider some real-world examples: **Cooking:** A recipe calls for 200g of flour. You can easily substitute this with about 0.44 pounds of flour. **Shipping:** If you are shipping a package weighing 200g, you would declare its weight as approximately 0.44 pounds on international shipping forms. **Science:** In a scientific experiment requiring 200g of a reagent, you can use this conversion to report the weight in pounds if necessary.

Key Takeaways and Insights

Understanding the conversion between grams and pounds is essential for navigating a globalized world. Remember the approximate conversion factor: 454 grams is roughly equal to 1 pound. While precision is crucial in scientific contexts, for everyday use, the simplified factor provides sufficient accuracy. You can easily perform this conversion using a calculator or even a simple division.

Frequently Asked Questions (FAQs)

1. Is there an online converter for grams to pounds? Yes, many websites offer free online converters for various units, including grams to pounds. Simply search "grams to pounds converter" on your preferred search engine. 2. Which conversion factor is more accurate? The precise conversion factor ($1 \text{ lb} \approx 453.592 \text{ g}$) is more accurate, but the simplified factor ($1 \text{ lb} \approx 454 \text{ g}$) offers sufficient accuracy for most everyday situations. 3. Can I convert pounds to grams using the same method? Yes, you can. Simply multiply the number of

pounds by the conversion factor (either 453.592 g/lb or 454 g/lb) to get the equivalent in grams. 4. What if I need to convert kilograms to pounds? First, convert kilograms to grams (1 kg = 1000 g), then use the gram-to-pound conversion factor. 5. Are there other units of mass I should know about? Yes, ounces (oz) are another common unit in the imperial system (16 oz = 1 lb). Understanding ounces will further enhance your ability to navigate between metric and imperial units.
